New capabilities in the FBK Sensors and Devices research centre

Prof. Gianluigi Casse

Direttore del Centro Materiali e Microsistemi (FBK-CMM)

The Sensors and Devices centre of FBK has been upgrading its facilities through two distinct substantial funding schemes (FESR and IPCEI) since 2018. The rationale behind the upgrade of our facilities has been enhancing our focus on nanotechnologies and heterogeneous integration of the different technology platforms to provide new or significantly improved capabilities for the core activities of the centre: various types of sensors, micro-devices and increasingly devices for quantum technologies. I will provide an overview of the activities and the perspectives opened by the ongoing investments.
