The Rome URT of IMEM: research activities and perspectives

Dr.ssa Silvia Battistoni

IMEM-CNR, Roma

This presentation will focus on the current research activities and possible outlooks of the Unità di Ricerca presso Terzi (URT), recently established at the University of Rome "Tor Vergata" and carried out in collaboration with the Department of Chemical Science and Technologies, which recently received the prestigious recognition of "Dipartimento di Eccellenza 2023-2027".

This seminar will illustrate the main research activities carried out in the URT, ranging from the synthesis and characterization of innovative materials for electronics (from doped diamond to conductive polymers) to neuromorphic and hybrid networks bio-applications.
